**VNR SEEDS PVT. LTD.**

**VNR SEED**  
GOOD SEED BETTER YIELD

# Bitter Gourd

## VNR 211 (F1-HYBRID)

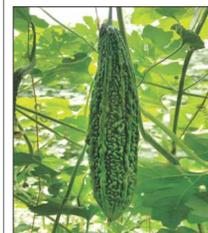

New Hybrid

**First Harvest :** 47-50 days  
**Fruit :** Dark green, uniformly shaped fruits length 14-16 cm, width 4-4.5 cm  
**Fruit Weight :** 110-120 gm  
 - High yield potential  
 - Good for long distance transportation

## NAKUL (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Dark green, small attractive spiny spindle shaped fruits length 11-13 cm, width 4-4.5 cm  
**Fruit Weight :** 50-70 gm  
 - Good crop longevity

## SUNNY (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Attractive dark green glossy, smooth spine length 12-15 cm, width 3.5-4 cm  
**Fruit Weight :** 80-100 gm  
 - Good fruit uniformity & maintains size after successive picking

## NANDITA (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Attractive dark green glossy fruits with blunt spines length 20-22 cm, width 3.5-4.5 cm  
**Fruit Weight :** 120-140 gm  
 - Good crop longevity  
 - Good keeping quality

## VNR NT 222 (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Attractive dark green, pointed hard spine length 18-20 cm, width 4-4.5 cm  
**Fruit Weight :** 110-120 gm  
 - Very good for long distance transportation  
 - High yield potential

## AAKASH (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Attractive dark green, continuous pointed & flexible spine length 20-25 cm, width 4-5 cm  
**Fruit Weight :** 150-160 gm  
 - High yielder & consistent performer

## SAAHI (F1-HYBRID)

**First Harvest :** 40-45 days  
**Fruit :** Dark green, small and spiny fruit length 8-10 cm, width 3.5-4 cm  
**Fruit Weight :** 40-60 gm  
 - Attractive glossy fruits  
 - High yielder & consistent performer

## VNR NT 77 (F1-HYBRID)

**First Harvest :** 42-45 days  
**Fruit :** Attractive dark green glossy, spiny length 22-25 cm, width 4-4.5 cm  
**Fruit Weight :** 130-150 gm  
 - Very early hybrid  
 - Prolific fruit bearing

## VNR-22 (F1-HYBRID)

**First Harvest :** 55-60 days  
**Fruit :** Green, spindle shaped fruits with pointed spine length 15-20 cm, width 5-6 cm  
**Fruit Weight :** 120-130 gm  
 - Early bulker  
 - Good vine longevity

## VNR-28 (F1-HYBRID)

**First Harvest :** 47-50 days  
**Fruit :** Green short spindle shaped fruits length 6.5-7.5 cm, width 4-4.5 cm  
**Fruit Weight :** 30-40 gm  
 - Early hybrid with short picking interval  
 - Good cooking quality & excellent taste

## VISHNU (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Dark green, spindle shaped glossy fruits length 25-27 cm, width 4-4.5 cm  
**Fruit Weight :** 140-160 gm  
 - Uniform fruit shape & size  
 - Good heat & cold set

## KARAN (F1-HYBRID)

**First Harvest :** 42-45 days  
**Fruit :** Dark green, smooth spine spindle shaped fruits length 8-10 cm, width 4-4.5 cm  
**Fruit Weight :** 40-60 gm  
 - Early hybrid with high fruit bearing  
 - Uniform fruit size through successive picking

## Bitter Gourd, Bottle Gourd & Sponge Gourd

### VNR 42 (F1-HYBRID)

**First Harvest** : 50-55 days  
**Fruit** : Dark green,  
 glossy smooth fruits  
 length 14-16 cm,  
 width 3.5-4 cm  
**Fruit Weight** : 80-100 gm  
 - *Early bulker & very high yield potential*  
 - *Uniform fruit size*

### VNR 52 (F1-HYBRID)

**First Harvest** : 50-55 days  
**Fruit** : Dark green,  
 glossy smooth fruit  
 length 12-14 cm,  
 width 3-3.5 cm  
**Fruit Weight** : 60-80 gm  
 - *Early bulker & very high yield potential*  
 - *Good crop longevity*

### MANAS (F1-HYBRID)

**First Harvest** : 50-55 days  
**Fruit** : Dark green  
 length 18-22 cm,  
 width 4-4.5 cm  
**Fruit Weight** : 120-140 gm  
 - *Medium early hybrid*  
 - *Wider adaptability*

### VNR 493 (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Dark green  
 length 16-18 cm  
 width 3.5-4 cm  
**Fruit Weight** : 100-120 gm  
 - *Prolong harvesting period*  
 - *Early bulker*

### AMBER (F1-HYBRID)

**First Harvest** : 40-45 days  
**Fruit** : Dark green spindle shaped  
 fruit with blunt spines  
 length 20-22 cm,  
 width 4-4.5 cm  
**Fruit Weight** : 100-120 gm  
 - *Early hybrid & early bulker*  
 - *Very high yield potential*

### YUVRAJ (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Dark green glossy fruits with  
 pointed spines  
 length 22-25 cm,  
 width 3.5-4.5 cm  
**Fruit Weight** : 130-150 gm  
 - *Very early hybrid*  
 - *Early bulker & short picking interval*

### KIRTI (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Cylindrical green  
 attractive fruits  
 length 25-30 cm,  
 width 5-6 cm  
**Fruit Weight** : 600-800 gm  
 - *Early fruiting*  
 - *Heavy fruit bearing*

### MAHI (F1-HYBRID)

**First Harvest** : 55-60 days  
**Fruit** : Green, smooth & glossy, long  
 cylindrical  
 length 35-40 cm,  
 width 5.5-6 cm  
**Fruit Weight** : 1.2-1.5 kg  
 - *Good keeping quality*  
 - *High yield with good endurance*

### HARUNA (F1-HYBRID)

**First Harvest** : 42-47 days  
**Fruit** : Parrot green, long, smooth  
 length 25-30 cm,  
 width 6.5-7.5 cm  
**Fruit Weight** : 700-800 gm  
 - *Very early hybrid*  
 - *Attractive fruit colour*

### SARITA (F1-HYBRID)

**First Harvest** : 60-65 days  
**Fruit** : Green, elongated  
 length 35-40 cm,  
 width 7-9 cm  
**Fruit Weight** : 1-1.25 kg  
 - *Prolific bearer*  
 - *Uniform fruit size*

### RANJHA (F1-HYBRID)

**First Harvest** : 50-55 days  
**Fruit** : Bulb shaped, light green  
 length 20-22 cm,  
 width 13-15 cm  
**Fruit Weight** : 600-800 gm  
 - *Good keeping quality*

### ALOK (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Attractive dark green,  
 long thin fruits  
 length 20-25 cm,  
 width 3-4 cm  
**Fruit Weight** : 100-150 gm  
 - *Early & profuse fruit set*  
 - *More number of pickings*

# Sponge Gourd, Ridge Gourd & Cucumber

## VNR SG 670 (F1-HYBRID)

**First Harvest :** 42-45 days  
**Fruit :** Light green, smooth attractive fruits length 25-30 cm

- Early crop with good longevity
- Light green smooth fruits with excellent fruit uniformity

## RATIMA (F1-HYBRID)

**First Harvest :** 42-45 days  
**Fruit :** Green & glossy length 22-24 cm

- Good fruits uniformity
- Good crop longevity

## ANITA (F1-HYBRID)

**First Harvest :** 40-45 days  
**Fruit :** Green colour long & thin fruits length 24-26 cm, width 3-3.5 cm

**Fruit Weight :** 120-150 gm  
 - Early bulker  
 - Uniform fruit shape

## KUHU (F1-HYBRID)

**First Harvest :** 40-45 days  
**Fruit :** Attractive dark green length 22-24 cm, width 3.2-3.5 cm

**Fruit Weight :** 110-150 gm  
 - Early bulker  
 - High yield potential

## VNR RG 425 (F1-HYBRID)

**New Hybrid**

**First Harvest :** 45-50 days  
**Fruit :** Attractive dark green fruits length 42-45 cm, width 3.5-4.5 cm

**Fruit Weight :** 250-280 gm  
 - Good for long distance transportation  
 - Long, uniformly shaped fruits

## AARTI (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Attractive green uniform fruits length 25-30 cm, width 2.2-2.6 cm

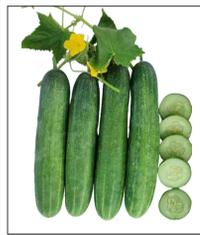

**Fruit Weight :** 200-225 gm  
 - Uniform fruit quality  
 - Extended harvest variety

## RAJNI (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Elongated attractive dark green fruits length 35-40 cm, width 3.5-4.5 cm

**Fruit Weight :** 250-300 gm  
 - Early hybrid with high yield potential

## KUSH 66 (F1-HYBRID)

**First Harvest :** 45-48 days  
**Fruit :** Mottle with dark green length 20-22 cm, width 3.5-4 cm

**Fruit Weight :** 180-200 gm  
 - Good crop longevity  
 - High plant vigor

## KUMUD (F1-HYBRID)

**First Harvest :** 45-47 days  
**Fruit :** Attractive green fruits length 16-20 cm, width 2.5-4 cm

**Fruit Weight :** 150-200 gm  
 - Desi type fruits with very good taste  
 - Early bulker & high yield potential

## KRISH (F1-HYBRID)

**First Harvest :** 30-35 days  
**Fruit :** Green colour desi type crisp fruits length 18-20 cm, width 3.5-4 cm

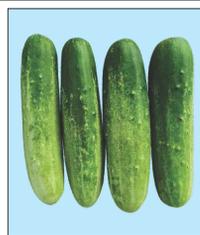

**Fruit Weight :** 150-200 gm  
 - Early hybrid & early bulker  
 - Uniform fruits after multiple picking

## SANA (F1-HYBRID)

**First Harvest :** 45-48 days  
**Fruit :** Mottle green length 18-22 cm, width 3.5-4 cm

**Fruit Weight :** 180-200 gm  
 - Uniform fruits after multiple pickings too  
 - Good for long distance transportation

## PURVA (F1-HYBRID)

**First Harvest :** 42-45 days  
**Fruit :** Mottle green length 16-20 cm, width 3.5-4 cm

**Fruit Weight :** 150-180 gm  
 - Desi type, crisp fresh fruits  
 - Good crop longevity

# Pumpkin & Ash Gourd

	<p><b>VNR 58</b> (F1-HYBRID)</p> <p><b>First Harvest :</b> 75-85 days  <b>Fruit :</b> Dark green fruit with yellow flesh, flat round fruit  <b>Fruit Weight :</b> 4-6 kg  <i>- Early bulker</i>  <i>- High yield with uniform fruits</i></p>

# Tomato & Chilli

**VNR 1064**  
(F1-HYBRID)

New Hybrid

**First Harvest** : 60-65 days  
**Fruit Shape** : Oval  
**Plant Type** : Determinate  
**Fruit Weight** : 90 -100 gm  
 - Firm fruits suitable for long-distance transportation  
 - Attractive red-colored fruits

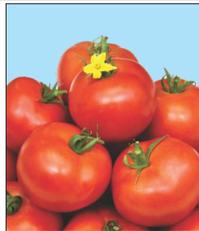

**VNR-3171**  
(F1-HYBRID)

**First Harvest** : 65-70 days  
**Fruit Shape** : Oblong  
**Plant Type** : Semi-determinate  
**Fruit Weight** : 85-90 gm  
 - Good toughness  
 - Prolific fruit bearer

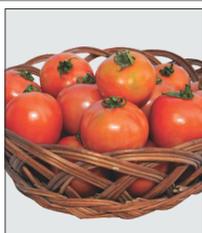

**MEGHA**  
(F1-HYBRID)

**First Harvest** : 60-65 days  
**Fruit Shape** : Round with good fruit firmness  
**Plant Type** : Semi-determinate  
**Fruit Weight** : 90-100 gm  
 - Very high yield potential  
 - Maintains fruit uniformity in subsequent picking

**UMA**  
(F1-HYBRID)

**First Harvest** : 60-65 days  
**Fruit Shape** : Flat round  
**Plant Type** : Semi-determinate  
**Fruit Weight** : 80-90 gm  
 - Heavy fruit bearing

**VAANI**  
(F1-HYBRID)

**First Harvest** : 55-60 days  
**Fruit Shape** : Round  
**Plant Type** : Semi-determinate  
**Fruit Weight** : 80-85 gm  
 - Early hybrid with heavy fruit bearing  
 - Early bulker hybrid

**VNR 3357**  
(F1-HYBRID)

**First Harvest** : 65-70 days  
**Fruit Shape** : Round  
**Plant Type** : Semi-determinate  
**Fruit Weight** : 90-100 gm  
 - High firm fruit  
 - Good for transportation  
 - Uniform fruit weight

**VNR 446**  
(F1-HYBRID)

**First Harvest** : 42-45 days  
**Fruit** : Dark green  
 length 8-10 cm,  
 width 0.9-1 cm  
**Pungency** : High  
 - Early hybrid  
 - Tough fruits, good for transportation

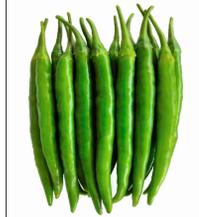

**BLACK BULLET**  
(F1-HYBRID)

**First Harvest** : 55-60 days  
**Fruit** : Green fruits with purple tinge  
 Small & conical shape fruits  
 length 4-5 cm,  
 width 1.2-1.5 cm  
**Pungency** : High with good aroma  
 - Attractive fruit colour  
 - Plant type is strong, good longevity

**KRISHNA (VNR-377)**  
(F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Attractive dark purple fruits  
 length 9-10 cm,  
 width 0.8-1 cm  
**Pungency** : High  
 - Attractive fruit colour  
 - Tough fruits with good keeping quality

**VNR 357**  
(F1-HYBRID)

**First Harvest** : 50-55 days  
**Fruit** : Attractive green fruit  
 length 10-11 cm,  
 width 1-1.2 cm  
**Pungency** : High  
 - Good attractive green colour fruits with good mandi acceptance

**RAMBA**  
(F1-HYBRID)

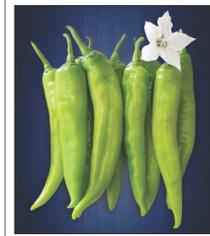

**First Harvest** : 45-50 days  
**Fruit** : Green, smooth & shiny  
 length 15-17 cm,  
 width 1.2-1.3 cm  
**Pungency** : High  
 - Short picking interval  
 - Tough fruits, good for transportation

**VNR-38**  
(F1-HYBRID)

**First Harvest** : 40-45 days  
**Fruit** : Light green, smooth  
 length 8 -11 cm,  
 width 2.5-3 cm  
**Pungency** : Intermediate  
 - Best suited for A chari segment  
 - Suitable for processing

# Chilli

## VNR 836 (F1-HYBRID)

**First Harvest** : 50-55 days  
**Fruit** : Green  
 length 14-16 cm,  
 width 2.5-2.8 cm  
**Pungency** : Medium  
 - *Achari type, uniform fruit length*  
 - *Desi type texture with vertical depression*

## VNR-109 (F1-HYBRID)

**First Harvest** : 40-45 days  
**Fruit** : Light green, smooth texture  
 length 13-17 cm,  
 width 1.4-1.7 cm  
**Pungency** : Medium  
 - *Early hybrid with very good heat set*  
 - *Umbrella canopy*  
 - *Short picking interval*

## PARI (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Light green, smooth texture  
 length 14-16 cm,  
 width 1.6-1.8 cm  
**Pungency** : Medium  
 - *Very good heat set*  
 - *Short picking interval*

## VNR-VIDYA (725) (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Light green, smooth  
 length 10-12 cm,  
 width 1.2-1.4 cm  
**Pungency** : Medium  
 - *Early hybrid with profuse fruit bearing*  
 - *Good keeping quality*

## VNR 1262 (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Green colour glossy  
 fruits, smooth texture  
 length 6-8 cm,  
 width 1-1.1 cm  
**Pungency** : High  
 - *Early hybrid*  
 - *Tough fruits, good for distant transportation*

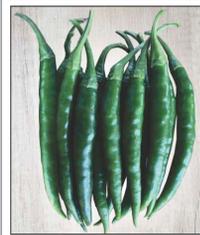

## VNR-1921 (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Parrot green, smooth &  
 glossy fruits  
 length 16-18 cm,  
 width 2-2.5 cm  
**Pungency** : Medium  
 - *Low inter-node distance*  
 - *High secondary branches*

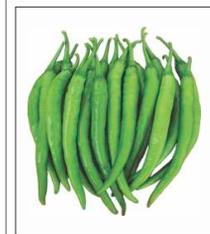

## VNR 332 (RANI) (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Light green, smooth texture  
 length 12-14 cm,  
 width 1-1.2 cm  
**Pungency** : High  
 - *Attractive smooth & shiny fruits*  
 - *Suitable for distant transportation*

## ROHINI (F1-HYBRID)

**First Harvest** : 50-55 days  
**Fruit** : Dark green  
 length 8-9 cm,  
 width 0.9-1 cm  
**Pungency** : Medium  
 - *Tough fruit*  
 - *Suitable for transportation*

## VNR-145 (F1-HYBRID)

**First Harvest** : 50-55 days  
**Fruit** : Parrot green,  
 smooth & shiny  
 length 12-16 cm,  
 width 1.2-1.4 cm  
**Pungency** : High  
 - *Early hybrid with short picking interval*  
 - *Very good heat set variety*

## VNR-978 (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Parrot green, smooth &  
 glossy fruits  
 length 20-24 cm,  
 width 1.3-1.5 cm  
**Pungency** : High  
 - *Good heat set*

## SAHIBA (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Green to light green, smooth  
 length 11-12 cm,  
 width 1.1-1.2 cm  
**Pungency** : High  
 - *High glossy fruits*  
 - *Good for fresh green & red chilli*

## VNR 1366 (F1-HYBRID)

**First Harvest** : 45-50 days  
**Fruit** : Green colour, smooth texture,  
 glossy fruits  
 length 5.5-7 cm,  
 width 0.8-1 cm  
**Pungency** : High  
 - *Upright solitary bearing*  
 - *Tough skin* - *Short picking interval*

# Chilli

## RUDRA 144 (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Dark green  
 length 8-10 cm,  
 width 1-1.1 cm  
**Pungency :** Med. to High  
 - Comparative Leaf Curl virus tolerance  
 - High individual fruit weight

## VNR 84 (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Dark green  
 length 11-13 cm,  
 width 1-1.2 cm  
**Pungency :** High  
 - Plant type semi spreading with high vigor  
 - High yield (Early bulker & more fruit load)

## VNR-577 (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Green  
 length 11-13 cm,  
 width 1.5-2 cm  
**Pungency :** Medium  
 - Dual purpose hybrid

## VNR 788 (F1-HYBRID)

**First Harvest :** 55-60 days  
**Fruit :** Green colour, medium long  
 smooth texture fruits  
 length 10-12 cm,  
 width 1.2-1.4 cm  
**Pungency :** High  
 - Quick dry property with good dry recovery  
 - Dual purpose hybrid

## VNR-314 (F1-HYBRID)

**First Harvest :** 40-45 days  
**Fruit :** Light green, smooth  
 length 10-12 cm,  
 width 1.2-1.4 cm  
**Pungency :** High  
 - Early & heat set variety  
 - Suitable for distant transportation  
 - Short picking interval

## VNR 286 (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Light green  
 length 10-12 cm,  
 width 1.2-1.4 cm  
**Pungency :** Medium  
 - Attractive glossy fruits  
 - Good plant canopy

## VNR 285 (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Green  
 length 12-14 cm,  
 width 1-1.1 cm  
**Pungency :** Medium  
 - Early hybrid with high yield potential  
 - Dual purpose hybrid

## VNR 1307 (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Dark green, smooth  
 length 9-10 cm,  
 width 1-1.1 cm  
**Pungency :** Medium  
 - Tough fruits - Umbrella canopy  
 - High yield potential

## VNR-277 (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Light green, smooth  
 length 12-14 cm,  
 width 1-1.2 cm  
**Pungency :** High  
 - Dual purpose variety with  
 good red powder quality

## SUNIDHI (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Green  
 length 11-12 cm,  
 width 1-1.2 cm  
**Pungency :** High  
 - Tough fruits - Dual purpose variety  
 - Short picking interval

## VNR UNNATI (60-13) (F1-HYBRID)

**First Harvest :** 42-45 days  
**Fruit :** Uniform dark green  
 length 9-11 cm,  
 width 0.9 -1 cm  
**Pungency :** High  
 - Early hybrid  
 - Good heat & cold set  
 - Best suited for small fresh green market

## NUTAN (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Dark green  
 length 8-9 cm,  
 width 0.9-1 cm  
**Pungency :** High  
 - Dark green fruits fetches good mandi price  
 - Tough fruit, good for transportation

# Chilli & Brinjal

## VNR 1706 (F1-HYBRID)

**First Harvest :** 80-90 days  
**Fruit :** Dark red on ripening  
 length 14-16 cm,  
 width 1.3-1.5 cm  
**Pungency :** Low  
 - Early first picking with wrinkled fruits  
 - Quick dry property with high dry recovery  
 - Extended harvest variety

## RAJGAON

**First Harvest :** 60-65 days  
**Fruit :** Purple green, oblong  
 with light purple calyx  
 length 12-14 cm,  
 width 7-8.5 cm  
**Fruit Weight :** 200-250 gm  
 - Excellent for Bharta

## GLOSSY 56 (F1-HYBRID)

**First Harvest :** 55 days  
**Fruit :** Attractive purple glossy fruit  
 length 18-24 cm,  
 width 4-5 cm  
**Fruit Weight :** 90-120 gm  
 - Strong & Erect plant type  
 - High glossiness on the fruit  
 - High yield

## MUKTA MOTI (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Dark purple, oval,  
 purple calyx  
 length 10-12 cm,  
 width 5.5-6.5 cm  
**Fruit Weight :** 100-120 gm  
 - Attractive shiny fruits

## MUKTA ROUND (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Dark purple, round,  
 purple calyx  
 length 7-8 cm,  
 width 7-8 cm  
**Fruit Weight :** 140-160 gm  
 - Good cooking quality  
 - Continuous fruiting

## MANJUSHREE (F1-HYBRID)

**First Harvest :** 50-60 days  
**Fruit :** Purple variegated  
 length 8-9 cm,  
 width 6-7 cm  
**Fruit Weight :** 70-90 gm  
 - Cluster fruit bearing

## SIMRAN (F1-HYBRID)

**First Harvest :** 50-55 days  
**Fruit :** Light purple green variegated,  
 green calyx  
 length 7-8 cm,  
 width 4-4.5 cm  
**Fruit Weight :** 80-100 gm  
 - Profuse bearing in clusters

## VNR-B5 (F1-HYBRID)

**First Harvest :** 42-47 days  
**Fruit :** Green variegated, round,  
 green spiny calyx  
 length 8-10 cm,  
 width 7-8 cm  
**Fruit Weight :** 100-150 gm  
 - Good cooking quality

## VNR-ROMI (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Green variegated, oval,  
 green calyx  
 length 8-10 cm,  
 width 6-8 cm  
**Fruit Weight :** 120-140 gm  
 - Good keeping quality

## VNR-HARSH (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Green variegated,  
 green calyx, small oval  
 length 8-9 cm,  
 width 5-6 cm  
**Fruit Weight :** 100-110 gm  
 - Cluster bearing with long harvest window

## RG GREEN

**First Harvest :** 55-60 days  
**Fruit :** Green, oblong shaped,  
 long green calyx  
 length 12-15 cm,  
 width 8-10 cm  
**Fruit Weight :** 200-300 gm  
 - Good in taste, glossy fruits - Fetches good  
 mandi price due to its long green calyx

## UTKAL (F1-HYBRID)

**First Harvest :** 42-45 days  
**Fruit :** Green variegated,  
 green calyx  
 length 10-14 cm,  
 width 5-8 cm  
**Fruit Weight :** 125-150 gm  
 - Early hybrid & early bulker  
 - Good in taste

# Brinjal & Okra

## KANCHI (F1-HYBRID)

**First Harvest :** 55-60 days  
**Fruit :** Light green,  
 long green calyx  
 length 10-12 cm,  
 width 5-7 cm  
**Fruit Weight :** 140-160 gm  
 - Prolific fruit bearing

## VNR-212 (F1-HYBRID)

**First Harvest :** 42-45 days  
**Fruit :** Dark violet oblong,  
 purplish calyx  
 length 9.5-10.5 cm,  
 width 4.5-5 cm  
**Fruit Weight :** 100-150 gm  
 - Cluster bearing & continuous fruiting

## NAVINA (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Purple, long, green calyx  
 length 10-12 cm,  
 width 4-5 cm  
**Fruit Weight :** 80-100 gm  
 - Less number of seeds, good in taste

## VNR-60 (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Purple, long,  
 purple calyx  
 length 10-12 cm,  
 width 4-5 cm  
**Fruit Weight :** 40-60 gm

## VNR-125 (F1-HYBRID)

**First Harvest :** 50-60 days  
**Fruit :** Dark purple, oval,  
 green calyx  
 length 13-15 cm,  
 width 3-4 cm  
**Fruit Weight :** 80-120 gm  
 - Attractive uniform fruits  
 - Extended harvest variety

## SAMIDHA (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Light purple, oval,  
 green smooth calyx  
 length 6-8 cm,  
 width 5-7 cm  
**Fruit Weight :** 60-80 gm  
 - Cluster fruiting

## VNR-51 P (F1-HYBRID)

**First Harvest :** 48-55 days  
**Fruit :** Violet, elongated egg shaped  
 length 9-10 cm,  
 width 4.5-5 cm  
**Fruit Weight :** 40-60 gm  
 - Hot set variety

## SILIGUDI-111

**First Harvest :** 50-60 days  
**Fruit :** Reddish-purple,  
 oval with green calyx  
 length 10-13 cm,  
 width 6-8 cm  
**Fruit Weight :** 90-100 gm  
 - Fruits have good keeping quality  
 - Excellent taste

## VBH 11 (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Attractive dark green with  
 ridges  
 - Tender dark green fruit  
 - Medium tall plant with cut leaves  
 - Comparative tolerant to YVMV

## JANHVI (F1-HYBRID)

**First Harvest :** 48-52 days  
**Fruit :** Attractive dark green with  
 ridges  
 - Tender green fruit quality  
 - Short inter-node distance & lateral branching  
 - High yield potential

## VBH 980 (F1-HYBRID)

**First Harvest :** 45-50 days  
**Fruit :** Attractive dark green colour  
 smooth fruit  
 - Dwarf plant with semi-cut leaves & short  
 internodal difference  
 - High yielding potential  
 - Attractive dark green soft fruits

## VNR 999 (F1-HYBRID)

**First Harvest :** 42-45 days  
**Fruit :** Attractive dark green colour  
 - Early hybrid & early bulker  
 - Medium plant height with  
 short inter-node distance  
 - Comparative tolerance to ELCV  
 - Dark green fruits fetches higher mandi price

# Okra & Cowpea

**VBH 932**  
(F1-HYBRID) New Hybrid

**First Harvest** : 40-45 days  
**Fruit** : Dark green

- Early hybrid
- Medium-tall plant with cut leaves that make crop management easier
- Comparative tolerance to viral diseases and jassids

**SUDHA**

**First Harvest** : 50-55 days  
**Fruit** : Attractive dark green  
**Width** : 1.5-1.6 cm

- 8-9 cm tender fruits
- Good branching
- Easy picking
- High secondary branches

**RIYA**

**First Harvest** : 50-55 days  
**Fruit** : Dark green  
**Width** : 1.5-1.6 cm

- 9-10 cm tender fruits
- Short inter-node distance
- Good branching
- Easy picking

**CP 41**

**First Harvest** : 50-55 days  
**Fruit** : Light green fruit  
 length 30-35 cm

**Growth Habit:** Spreading type

- Spreading type plant with good longevity
- Excellent pod quality with no seed appearance even after delayed harvest

**HARITIMA**

**First Harvest** : 50-55 days  
**Fruit** : Dark green & attractive glossy fruit  
 length 30-32 cm

**Growth Habit:** Spreading type

- Spreading type plant with good longevity
- Excellent pod quality with glossy texture

**KASHI NIDHI**

**First Harvest** : 40-45 days  
**Fruit** : Green  
 length 25-30 cm

**Growth Habit:** Indeterminate

- Reddish brown seed colour
- High yield potential

**BAIJANTI**

**First Harvest** : 60-65 days  
**Fruit** : Reddish brown  
 length 45-50 cm

**Growth Habit:** Creeper

- Long harvest window

**VNR CP-27**

**First Harvest** : 60-65 days  
**Fruit** : Whitish green  
 length 45-50 cm

**Growth Habit:** Creeper

- Long soft fleshy pods

**JAPANI LALDANA**

**First Harvest** : 45-50 days  
**Fruit** : Dark green  
 length 38-45 cm

**Growth Habit:** Creeper

- Early variety

**SHWETA-N**

**First Harvest** : 55-60 days  
**Fruit** : Light green, straight  
 length 30-35 cm

**Growth Habit:** Creeper

- Attractive fruit

**LALIMA**

**First Harvest** : 45-50 days  
**Fruit** : Light reddish brown  
 length 25-28 cm

**Growth Habit:** Creeper

- Good cooking quality

**GOMCHI-1**

**First Harvest** : 65-70 days  
**Fruit** : Light green  
 length 22-25 cm

**Growth Habit:** Creeper

- Attractive fruit

# Cowpea, Dolichos, Onion, Cauliflower & Radish

**LALITA**

**First Harvest** : 45-50 days  
**Fruit** : Light reddish brown  
 length 25-30 cm  
**Growth Habit**: Bushy

- Staking is not required

**BARAMASI**

**First Harvest** : 45-50 days  
**Fruit** : Light green to white  
 length 22-25 cm  
**Growth Habit**: Bushy

- Photo & Thermo Insensitive,  
 can be grown round the year

**PAIRY**

**First Harvest** : 50-55 days  
**Fruit** : Green  
 length 16-20 cm,  
 width 1.7-1.9 cm  
**Growth Habit**: Bushy

- Flat pod sem variety  
 - Staking is not required

**SEM-3**

**First Harvest** : 65-70 days  
**Fruit** : Green, flattened  
 length 10-12 cm,  
 width 2.3-2.5 cm  
**Growth Habit**: Vine

- Prolific bearer  
 - Long harvest window

**BAUNI**

**First Harvest** : 65-70 days  
**Fruit** : Light green, straight  
 length 13-15 cm,  
 width 0.7-1 cm  
**Growth Habit**: Bushy

- Continuous fruit bearing  
 - Staking is not required

**SMV 53** New Variety

**First Harvest** : 55-60 days  
**Fruit** : Green  
 length 9-11 cm,  
 width 1.5-2 cm  
**Growth Habit**: Bushy

- High yielding  
 - Good rejuvenation and longevity

**ROHIT**

**Crop Maturity** : 80-90 days  
**Bulb** : Flat globe shaped,  
 dark red colour  
**Bulb Weight** : 70-80 gm

- Early maturing variety  
 - Suitable specifically for Kharif season of  
 South & Central India

**LOHIT**

**Crop Maturity** : 90-100 days  
**Bulb** : Flat globe shaped,  
 attractive red colour  
**Bulb Weight** : 80-100 gm

- Medium early maturing variety  
 - Suitable specifically for Kharif & Late  
 Kharif season of South & Central India

**RUBY**

**First Harvest** : 110-120 days  
**Bulb** : Dark red colour,  
 round shaped  
**Bulb Weight** : 90-120 gm

- 6 to 8 month storage capacity  
 - Suitable for Rabi season

**VCF 2001**  
 (F1-HYBRID)

**First Harvest** : 60-65 days  
**Type** : Semi tropical  
**Fruit Weight** : 1-1.2 kg (with leaves)

- Medium self covered, dome shaped,  
 milky white curds  
 - Wide adaptability

**WHITE LONG**  
 (F1-HYBRID)

**First Harvest** : 40-45 days  
**Colour** : Attractive white  
**Texture** : Smooth  
 length 25-30 cm  
**Fruit Weight** : 150-200 gm

- Early maturity hybrid  
 - Attains good size in smaller duration

**VRD 31**  
 (F1-HYBRID)

**First Harvest** : 30-32 days  
**Colour** : Attractive white  
**Texture** : Smooth  
 length 22-28 cm  
**Fruit Weight** : 180-200 gm

- Palak patta type  
 - Good heat tolerance

# Water Melon, Capsicum, Cluster Bean, Tinda, Sweet Corn & Papaya

## SUGAR KING (F1-HYBRID)

**Type** : Ice box  
**Fruit** : Elongated capsule shaped, deep red, crispy flesh with high sweetness  
**Fruit Weight** : 3-5 kg  
 - Medium early maturity  
 - Good level of wilting tolerance

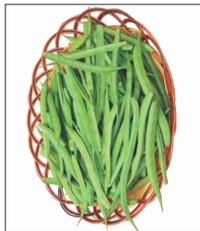

## SUPER SWEET (F1-HYBRID)

**Type** : Sugar baby  
**Fruit** : Round shaped, blackish green rind with red flesh  
**Fruit Weight** : 5-7 kg  
 - Very sweet in taste  
 - Thick rind, good for transportation

## SUPER WONDER

**First Harvest** : 50-55 days  
**Fruit** : Dark green length 8-10 cm, width 6-7.5 cm  
**Fruit Weight** : 150-200 gm  
 - Strong and vigorous plant  
 - Good shelf life and transportability

## MANSI

**First Harvest** : 55-60 days  
**Fruit** : Attractive light green length 10-13 cm  
**Fruit Shape** : Straight, erect  
 - Medium long tender pods  
 - Good cooking quality

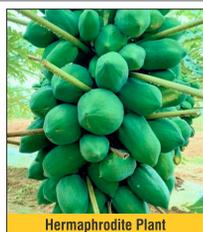

## HYBRID TINDA (F1-HYBRID)

**First Harvest** : 50-55 days  
**Fruit colour** : Light green  
**Fruit shape** : Round  
**Fruit skin** : Hairy length 3-5 cm, width 5-7 cm  
**Fruit Weight** : 120-140 gm

## SWEET PEARL (F1-HYBRID)

**Crop Maturity** : 75-80 days  
 - Attractive shiny and sweet grain, good in taste  
 - High uniform broad long cobs, good tip filling  
 - Easy grain extraction  
 - Wider adaptability  
 - Strong stem

## VINAYAK (F1-HYBRID)

**First Harvest** : Medium early  
**Fruit Shape** : Long cylindrical (H), Pear shaped (F)  
**Fruit Weight** : 1.5-2.5 kg  
 - Dark yellowish orange pulp - 60-65 % of edible pulp recovery  
 - Sweet taste - Moderately soft chew

Hermaphrodite Fruit

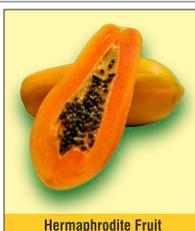

Female Plant

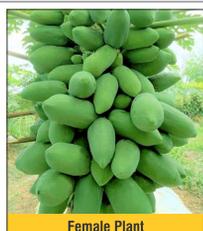

## VNR AMEENA (F1-HYBRID)

**First Harvest** : Early  
**Fruit Shape** : Long cylindrical (H), Elongated round (F)  
**Fruit Weight** : 1-1.5 kg  
 - Light yellowish orange pulp - 70-75% of edible pulp recovery  
 - Very sweet, desi taste - Soft chew

Hermaphrodite Fruit

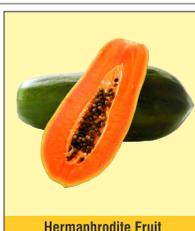

Female Plant

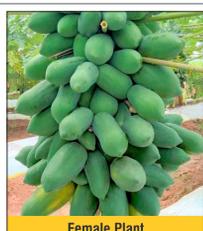

## VNR SHABNAM (F1-HYBRID)

**First Harvest** : Medium early  
**Fruit Shape** : Long cylindrical (H), Elongated round (F)  
**Fruit Weight** : 1.25-1.75 kg  
 - Dark yellowish orange pulp - 65-70 % of edible pulp recovery  
 - Very sweet, desi taste - Soft chew

Hermaphrodite Fruit

Female Plant

## Root Stocks

### VNR Garcia

- Hybrid Pepper Rootstock
- Used as rootstock for Hot Pepper and Sweet Pepper
- Provides tolerance against Bacterial Wilt, Phytophthora and Nematodes

### VNR Solato

- Generative Rootstock for Brinjal
- Provides tolerance to Bacterial Wilt, Fusarium Wilt, Verticillium Wilt and Nematodes
- Transfers tolerance of Phomopsis Blight to the scion
- Provides drought tolerance
- Performs very well in low fertility soils

### VNR Solmel

- Hybrid Brinjal Rootstock
- Used as rootstock for Tomato and Brinjal
- Provides tolerance against Bacterial Wilt & Nematodes

### VNR Sahara

- Hybrid Water Melon Rootstock
- Provides tolerance to Fusarium Wilt and Nematode
- Suitable as rootstock for Water Melon, Musk Melon, Round Melon and Cucumber

### VNR Summerfit

- Hybrid Melon Rootstock
- Used as rootstock for Cucumber, Water Melon and Musk Melon
- Provides tolerance against Fusarium Wilt

### VNR Winterfit

- Hybrid Figleaf Gourd Rootstock
- Excellent Cold tolerance
- Used as rootstock for Cucumber (only for winter season crop)
- Can be adopted for off season cultivation in cold areas

### VNR Lagesi

- Hybrid Bottle Gourd Rootstock
- Provides tolerance against Fusarium Wilt
- Suitable as rootstock for Water Melon, Round Melon and Bottle Gourd

### VNR Maximo

- Inter specific Hybrid Pumpkin Rootstock
- Used as rootstock for grafting Water Melon
- Provides tolerance against Fusarium Wilt
- Provides salt tolerance

**VNR SEED**  
GOOD SEED BETTER YIELD

## Field Crops - Paddy

### VNR 2102 (F1-HYBRID)

- Very early hybrid, crop duration : 98-100 days
- Good tolerance to *Blast*
- Suitable for low rainfall area
- Attractive long slender grain

### VNR 2111 POWER (F1-HYBRID)

- Very early hybrid, Crop Duration: 100-105 days
- Medium slender grain
- Suitable for low rainfall area
- Recommended for Potato/ Tobacco/ Pea crop rotation
- More productive tillers per plant
- More filled grains per panicle

### VNR 2222 (F1-HYBRID)

- Crop Duration: 110-115 days
- Medium slender grain
- Dwarf plants with strong stem
- More productive tillers per plant
- More filled grains per panicle

### VNR BHEEM 115 (F1-HYBRID)

- Crop Duration: Around 115 days
- Bold and weighted grain
- Field tolerance to *Blast*
- Good head rice recovery and good test weight
- Consistent performance across geography and season and wider adaptability

### VNR 2233 (F1-HYBRID)

- Crop Duration: 115-120 days
- Field tolerance to *Blast*
- Highly fertile panicles with long bold grain
- Intermediate height with strong stem
- High yield potential

### VNR 2226 (F1-HYBRID)

- Crop Duration: 115-120 days
- Long slender grain
- Strong stem with good lodging tolerance
- More productive tillers per plant
- High yield potential

### VNR 2253 (F1-HYBRID)

- Crop Duration: 120-125 days
- Medium slender grain
- Tolerant to *Bacterial Leaf Blight* (BLB) & *Blast*
- High grain per panicle
- Strong stem with moderate lodging tolerance

### VNR 2228 (F1-HYBRID)

- Crop Duration: Around 125 days
- Tolerant to *Bacterial Leaf Blight* (BLB) & *Blast*
- Medium slender grain
- Medium plant height & strong stem
- More filled grains per panicle & more tillers per plant

### VNR 2318 (F1-HYBRID)

- Crop Duration: Around 130 days
- Tolerant to *Bacterial Leaf Blight* (BLB) & *Blast*
- Medium slender grain
- Medium plant height & strong stem
- More filled grains per panicle & more tillers per plant

### VNR 2355 POWER (F1-HYBRID)

- Crop Duration: 130-135 days
- Medium slender grain
- Tolerant to *Bacterial Leaf Blight* (BLB)
- Good cooking quality & taste
- Long panicle with more grains/tillers

## Field Crops - Paddy & Mustard

### VNR 2377 (F1-HYBRID)

- Crop Duration: 130-140 days
- Medium bold grain
- Intermediate height with strong stem
- High yield potential

### VNR 2425 POWER (F1-HYBRID)

- Crop Duration: 140-145 days
- Medium bold grain
- Intermediate plant height with strong stem
- More filled grain per panicle and more tillers per plant
- High yield potential, wider adaptability

### VNR LAXMI PLUS (F1-HYBRID)

- Crop Duration: 145-150 days
- Medium bold grain
- Intermediate height with strong stem
- High yield potential

### VNR VEERA 10

New Variety

- Crop duration : 115-120 days
- Medium slender grain
- High grain per panicle
- Wider adaptability & high yield potential

### VNR MAHABALI

- Crop Duration: 125-130 days
- Short bold grain, high grain per panicle
- Good lodging tolerant
- High yield potential
- Consistent performer

### VNR DHANSHREE

- Crop Duration: 130-135 days
- Short slender grain
- More filled grains per panicle
- Strong stem with good lodging tolerance
- Consistent performance across geography

### VNR ANNAPURNA

- Crop Duration : Around 135 days
- Fine grain quality with good cooking quality
- Long panicle with more grain/tillers
- High yield potential

### VNR RAJ 11

New Variety

- Crop Duration : Around 140 days
- Good tolerance to *BLB & Blast*
- Attractive medium bold grain
- Medium height, strong stem
- More filled grains per panicle

### VNR 590

- Early maturity, crop duration : Around 110 days
- Medium tall plant with good secondary branches
- High Siliqua numbers per plant
- Attractive yellow medium bold grain and higher oil percentage
- Consistent performance across geography

### VNR 5020 (F1-HYBRID)

- Crop Duration : 125-130 days
- Medium tall plant with good secondary branches
- High yielding, Medium maturity hybrid with bold grain and better oil percentage
- Consistent performance across geography
- Better oil percentage & high yield potential

## Field Crop - Maize, Bajra & Wheat

### VNR 4226 (F1-HYBRID)

- Crop Duration: 100-105 days in Kharif
- Intermediate height with medium cob placement
- Uniform cobs with orange yellow semi flint grains
- Good performance even under water stress condition
- High yielding variety suitable for areas from medium to low fertile soils

### VNR 4352 (F1-HYBRID)

- Crop Duration: 105-110 days
- Attractive orange semi dent grains
- High uniform, medium long and broad cobs
- Good tip filling
- Good lodging tolerant
- High yield potential

### VNR 4272 (F1-HYBRID)

- Crop Duration: 100-105 days
- Medium long, medium broad high uniform ears with good tip filling
- Attractive orange flint grains
- Consistent performer with wider adaptability
- Good lodging tolerant

### VNR 4344 (F1-HYBRID)

- Crop Duration : 100-105 days
- Medium height plant with strong stem
- Attractive Orange yellow grains
- High uniform, medium long and broad cobs
- Field tolerant to disease
- High yield potential with wider adaptability

### VNR 4001 (F1-HYBRID)

- Crop Duration: 105-110 days
- High yield even in fields with limited water availability
- Yellow orange semi flint grains with higher adaptability
- Suitable for Kharif season sowing

### VNR 4453 (F1-HYBRID)

New Hybrid

- Attractive large uniform-sized cobs
- Strong stem, tolerant to lodging
- Suitable for spring sowing
- High yield potential

### VNR 3233 (F1-HYBRID)

- Crop Duration: 75-78 days
- Broad long cylindrical ear
- More productive tillers per plant
- Bold attractive grain with better fodder quality
- High yield potential

### VNR 3699 (F1-HYBRID)

- Crop Duration: 80-85 days
- Broad long almost cylindrical ear
- Good tip and base seed setting
- Attractive bold grain
- High yield potential

### VNR 602

- Crop Duration: 125-130 days
- Medium plant height (95-100 cm), strong stem
- More productive tillers
- Attractive panicles with more number of grains
- High yield potential

### VNR 601

- Crop Duration: 115-120 days
- Medium plant height (100-110 cm), strong stem
- More productive tillers
- Attractive panicles with more number of grains
- High yield potential
